                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This represents a polypeptide comprising a (modified) fragment (I) of a TATA box-binding protein associated factor II 105 (TAFTII05). A pharmaceutical composition comprising (I) or the polynucleotide or an inhibitor or antagonist of (I) is useful for treating cancers and inducing apoptosis in pathological cells. The composition is also useful for treating autoimmune diseases, inflammatory processes and viral or treating autoimmune diseases, inflammatory processes and viral or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptide encoding TATA box binding protein associated factor useful for treating e.g. cancers and inducing apoptosis has a donegative effect on the normal biological activity of the binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bacterial infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                              associated subunits (TAR's) are components of the transcription far TFIID and are thought to mediate transcriptional activation. This protein may be produced recombinantly from transformed host cells purified from human cells. hTAFIIIO5 specific binding agents such specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFIIIO5 transcripts), therapy (e.g. genetic therapy to modulate hTAFIIIO5 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isola cell specific activators or other transcriptional regulators).
                                                                                                                                                                                                                                                                                          This cDNA sequence represents a human tata-binding protein associated factor, hTAFTII105, isolated from Daudi cell nuclear extracts. Tightly associated subunits (TAF's) are components of the transcription factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TATA-binding protein associated binding factor 105; human; activate hTAFII105; transcription factor; TFIID; transcriptional activation; antibodies; diagnosis; therapy; biopharmaceutical industry.

```
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful in medical
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess blodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC at itp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                    This is the amino acid sequence of the human TATA-binding protein (TBP) associated factor (TAF) designated TAFIII30. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 130 kD by SDS-PAKE.

The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFS. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp. genes from lambda-gtll expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-JAN-1994;

TAF peptides derived from hTAFII30 alpha, hTAFII130 beta, hTAFII140, hTAFII170, hTAFII100, hTAFII130 hTAFII130, hTAFII130 hTAFII130, hTAFII130, hTAFII130, hTAFII150, hTAFII10 and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human TATA-binding protein associated (TAF) peptide(s) - for production of recombinant peptide(s),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 for modulating transcription of TAFs

                       CC ompound for interaction with essential proteins (EP) or for modulation of EP activity e.g fungal gene transcription. The proteins tested in the CC invention include RPC34, POP3, TFA2, NAB2, MPT1, MTR2, BOS1, POL30, RSA2, CC SQT1, MTW1, TFB1, SPC98, BFR2, RNA1, GCD7, SK16, NIP1, LCP5, NCE103, CC ECO1, ORC2, CNS1, YPD1, TIM10 and SRB4 from S. cerevisiae, C. albicans CC and human homologues. The method involves contacting a culture with one CC viability of the culture of cells which preferably comprises fungal cells or yeast cells. Preferably the identified compounds interact with, or CC modulate (preferably inhibit) activity of C. albicans EP. The inhibitor CC inhibiting fungal agents interact with service or in a manual. The antifungal agents interact with sesential fungal elements CC that can be used to treat fungal infection by preventing the growth and CC preferentially killing the fungal infection by preventing the growth and CC preferentially killing the fungal infection by preventing the growth and CC cativity of mammalian homologues. This amino acid sequence represents a CC method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

           This is the amino acid sequence of the Drosophila TATA-binding protein (TBP) associated factor (TAF) designated TAFTII10. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 110 kD by SDS-PAGE, a calculated mol. wt. based on sequence of the gene of 99.4 kD and an estimated pI of 10.1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFS. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresponens from lambda-gtll expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                             AAW25028 represents TATA-binding protein associated factor (TAF) polypeptide, dTAFII110 (mol. weight 110kD). TAF peptides derived from dTAFII30 alpha, dTAFII30 beta, dTAFII40, dTAFII60, dTAFII80, dTAFII110, dTAFII50, and dTAFII250, their human equivalents and nucleic acids encoding them, are used to modulate transcription, licluding transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

(ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; SEQ ID NO 11376;

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 24957; 21pp + Sequence Listing;

The factor interacts with proteins involved in the chromatin-mediated transcription regulatory mechanism. It binds to hSNF2H, hSNF2L and NCOA-62/Skip. It can be used for screening compounds binding to it and acting as agonists or antagonists, which are potentially useful for the treatment and prevention of cancer and other cell proliferation disorders.

The factor interacts with proteins involved in the chromatin-mediated transcription regulatory mechanism. It binds to hSNF2H, hSNF2L and NCOA-62/Skip. It can be used for screening compounds binding to it and acting as agonists or antagonists, which are potentially useful for the treatment and prevention of cancer and
